WHY VENKON?

What makes us different?

Venkon provides effective and unique solutions to cyber-security threats and IT compliance requirements of your organization. The company is founded on the commitment to design specific and custom tailored solutions that address information security challenges faced by different types of businesses and organizations.

CUSTOMER FIRST

In simple words, we put your needs and requirements as a client ahead of everything else!

TAILORED CYBERSECURITY SERVICES

Every client is unique. Our objective is always the same: to tailor our services to suit your business needs.

COST-EFFECTIVE

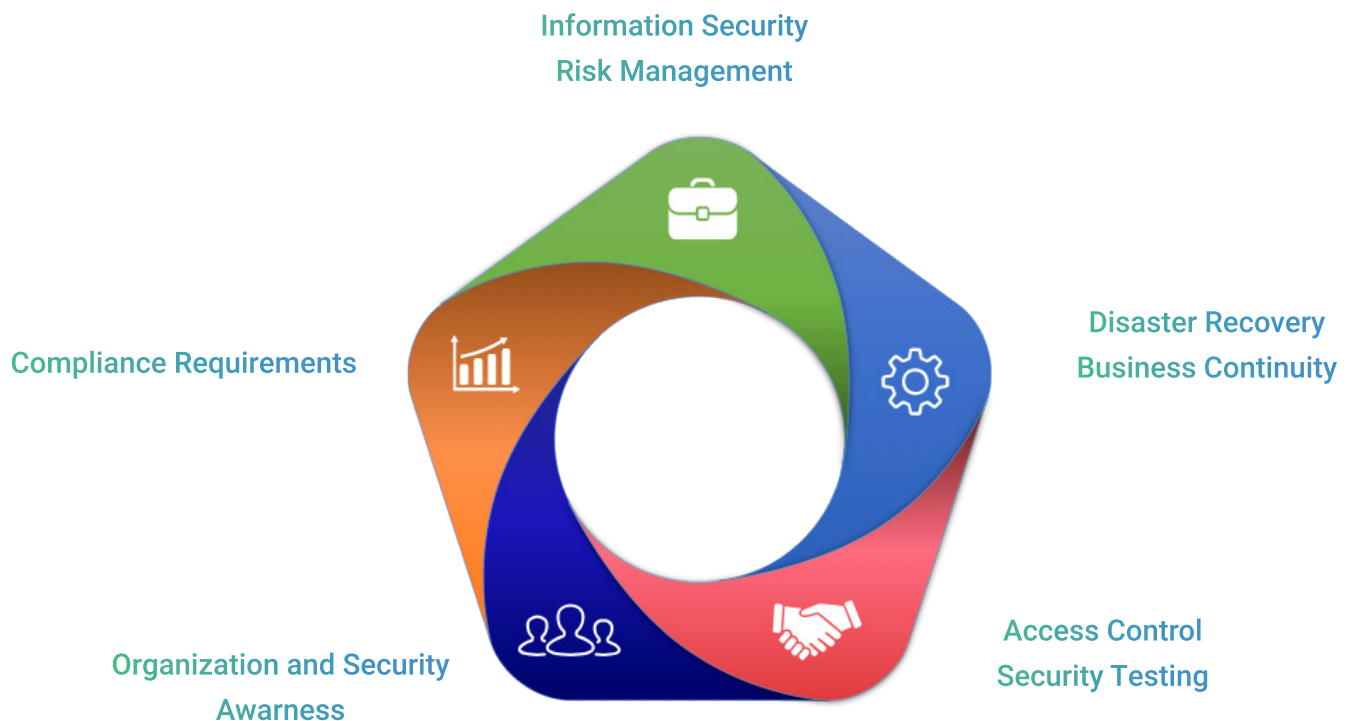

Best-in-Class cybersecurity services don't have to cost a fortune! We have developed a cost structure to deliver information security services at the best price for you.

INTRODUCTION

Why would an organization need to outsource CISO services?

In any company or organization, a CISO plays a key role in the organization's IT security matters such as IT security strategy design, implementation, assessment, and mitigation of any cyber-security risk. With the constantly evolving cyber threats experienced in recent times, your organization needs CISO services.

However, your company may not be in a position to recruit and employ a full-time, highly experienced Chief Information Security Officer probably because you are a small or medium-sized company seeking for a more cost-effective solution. You may also be looking for a temporary IT security expert to handle a specific project such as an upcoming audit or probably your CISO is on leave.

OBJECTIVES

With our vCISO service you'll get a seasoned team of professionals with full access to their skills and experience growing cybersecurity programs. With this service our vCISO's are able to fill in the role of CISO for your organization and help advise on the data security, compliance, and management related challenges your facing today.

The vCISO is typically responsible for overseeing the company's high-level Information Security activities and operations. This includes security policies, guidelines, compliance standards (ex. GLBA, SOX, FERPA, HIPAA, SSAE16 | SOC Reports). Venkon has prepared four package options for the vCISO responsibilities requirements according to the company's needs and mandate.

The breakdown of the options to be performed by the vCISO on a monthly or anual basis is listed below:

Introductory

1

This option focuses on establishing the baseline of a cybersecurity program for our clients. This is the foundation to which other vCISO packages and services are formed.

Standard

2

This option includes all services within the Introductory package and aims to increase the operational efficiency of how your cybersecurity program is being operate

Enterprise

3

This option encompasses both the Introductory and Standard packages and includes services that will push already established cybersecurity programs into a higher level of maturity.

Custom

4

This option allows for clients to mix and match particular services between packages to create a custom offering based off your unique security needs.
